

Project Design Phase

Solution Architecture

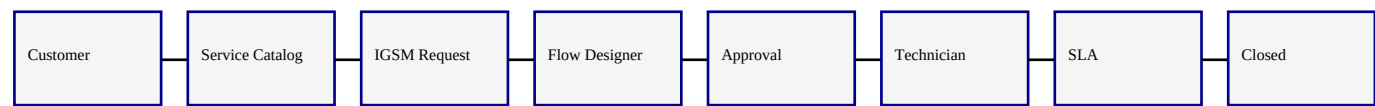

Date: 31 July 2026

Project Name: Indoor Gardening Services Management (IGSM)

Solution Architecture

The Indoor Gardening Services Management (IGSM) project is a ServiceNow-based application that allows customers to submit indoor gardening service requests, schedule plant maintenance, and track request status. Requests are submitted through the Service Catalog using a Record Producer, stored in the custom `x_igsm_indoor_garden_request` table, routed through an approval workflow, assigned to an IGSM technician using Flow Designer, and monitored using Response and Completion SLAs. Business Rules, Client Scripts, Notifications and ACLs automate and secure the complete lifecycle. Request states include **New** → **Pending Approval** → **Assigned** → **In Progress** → **Completed** → **Closed**.

Architecture Diagram

Components Used

Component	Description
Scoped Application	IGSM application
Custom Table	Stores service requests
Record Producer	Captures customer requests
Flow Designer	Approval, assignment and notifications
Business Rules	Backend validations
Client Scripts	UI validations
ACLs	Role-based security
SLAs	Response & Completion tracking

Conclusion

The IGSM application provides an automated, secure, and efficient solution for managing indoor gardening services through ServiceNow using Flow Designer, SLAs, ACLs, Business Rules, Client Scripts, and Notifications.
