

Technology Stack (Architecture & Stack)

Date	31 July 2026
Project Name	Indoor Gardening Services Management (IGSM)
Platform	ServiceNow

Technical Architecture

The Indoor Gardening Services Management (IGSM) application is implemented as a ServiceNow scoped application. Customers submit service requests through the Service Catalog, requests are stored in the custom IGSM table, automated using Flow Designer, validated through Business Rules and Client Scripts, secured with ACLs, monitored through SLAs, and reported through dashboards.

Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Service request submission and tracking	ServiceNow Service Catalog & Record Producer
2	Application Logic	Workflow automation and request processing	Flow Designer
3	Data Model	Indoor gardening request records	Custom Table: X_igsm_indoor_garden_request
4	User & Access Management	Role and group management	ServiceNow Roles & Groups
5	Security	Role-based and requester-based access	ACLs (Read, Write, Delete)
6	Validation	Backend and client-side validations	Business Rules & Client Scripts
7	SLA Management	Response and completion time tracking	ServiceNow SLA Engine
8	Notifications	Approval and service update notifications	Flow Designer Notifications
9	Reporting	Service performance and operational dashboards	ServiceNow Reports & Dashboards
10	Infrastructure	Application hosting and database platform	ServiceNow Cloud Platform

Application Characteristics

Characteristic	Implementation in IGSM
----------------	------------------------

Scoped Architecture	IGSM implemented as a dedicated ServiceNow scoped application
Security	Role-based access, requester-based ACLs, and controlled data access
Scalability	Supports additional users, technicians, and service requests through ServiceNow platform services
Availability	Hosted on the ServiceNow cloud platform with built-in platform availability
Performance	Automated workflows, SLA monitoring, and optimized server-side processing
