

Ideation Phase – Brainstorm & Idea Prioritization

Date: 30 July 2026

Project Name: Indoor Gardening Services Management (IGSM) – ServiceNow Application

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement

Indoor gardening service providers face challenges in managing customer service requests, maintenance scheduling, technician assignments, approvals, and service monitoring through manual processes. These issues result in delayed responses, inefficient task allocation, poor SLA compliance, limited visibility into service performance, and reduced customer satisfaction.

Proposed solution

Develop a ServiceNow-based Indoor Gardening Services Management (IGSM) application that digitizes and automates gardening service operations through service request management, approval workflows, technician assignment, maintenance scheduling, SLA monitoring, notifications, role-based access control, and performance dashboards.

Business objective

The primary objective of the IGSM application is to improve operational efficiency by automating service workflows, ensuring timely maintenance through SLA tracking, providing transparency in request management, and enhancing customer satisfaction through faster and more reliable service delivery.

Step-2: Brainstorm, Idea Listing and Grouping

Service request management

- Online gardening service request submission
- Plant maintenance scheduling
- Request status tracking
- Service history management
- Customer feedback collection

Workflow automation

- Automated approval workflows
- Technician auto-assignment based on availability
- Notification alerts for request updates
- Escalation for overdue requests
- Automated service completion confirmation

SLA and task management

- SLA definition for response and resolution times
- SLA breach alerts
- Priority-based task assignment
- Technician workload balancing
- Task progress monitoring

Role-based access control

- Customer role for request submission and tracking
- Technician role for task management
- Manager role for approvals and monitoring
- Administrator role for system configuration
- Secure access to reports and dashboards

Reporting and analytics

- Service request trends
- SLA compliance reports
- Technician performance dashboard
- Pending and completed requests dashboard
- Operational efficiency metrics

Step-3: Idea Prioritization

Idea	Customer Impact	Feasibility	Business Value	Priority
Online service request submission	High	High	High	High
Automated approval workflow	High	High	High	High
Technician assignment automation	High	High	High	High
SLA monitoring and breach alerts	High	High	High	High
Request status tracking	High	High	High	High
Role-based access control	Medium	High	High	High
Notifications and reminders	Medium	High	Medium	Medium
Performance dashboards	Medium	High	High	Medium
Predictive maintenance analytics	High	Medium	High	Low

Final Prioritized Solution

The team selected the following features for the first implementation phase of the ServiceNow IGSM application:

- Service request submission and tracking
- Automated approval workflows
- Technician assignment and task management

- SLA monitoring with escalation alerts
- Role-based access control
- Reports and dashboards for service performance

These features leverage ServiceNow capabilities such as workflows, notifications, SLA management, user roles, reporting, and dashboards to deliver an efficient and scalable indoor gardening service management solution.
